

Create an iOS app that has 2 tabs.

In the first tab, you should show a list of COVID stats. You should use the API from <https://apify.com/covid-19> to get the data.

When the user selects an item, you should present some details.

In the second tab, you can choose one of these two options:

1- Show the number of steps taken by the user. You should use Apple HealthKit API to get the data.

Also, show the number of steps in the month in a chart.

2- Show a list of countries and when the user selects an item, you should present some details. You should use the API from <https://restcountries.com> to get the data.

You **must** use SwiftUI for this project.

The UI is up to you, it does not matter too much.

Try providing production-ready code.

If there is something you want to do but don't have the time for, you can write in the comments to talk about it in the review session.
